

CM PRIMARY SHREDDERS

The Toughest Shredders in the Industry

Processes whole tires into rough shreds for disposal or further processing to Tire Derived Aggregate (TDA), Tire Derived Fuel (TDF), or Feed Stock for Crumb Rubber Applications.

CM Primary Shredders are the workhorse of the industry. They process from off road tires down to passenger tires. Larger off road tires may need to be pre-cut and or debanded prior to processing.

They process whole tires into rough shreds for disposal. These rough shreds can also be fed to Chipping Shredders to produce specifically sized chips in high production applications for Tire Derived Aggregate (TDA) or Tire Derived Fuel (TDF).

With the addition of a disc screen the Primary Shredder can be used to produce 4 to 6 inch chips ideal for Stage 2 processing in Crumb Rubber applications.

MODELS AVAILABLE

DUAL DRIVE

- HT-150
- HT-250

SINGLE DRIVE

- H-150
- H-250

PRODUCTION RATES

ROUGH SHRED
UP TO 30 TONS PER HOUR

4" [100 MM] – 6" [150 MM] CHIPS
UP TO 8 TONS PER HOUR

ROUGH SHRED

FEATURES & BENEFITS

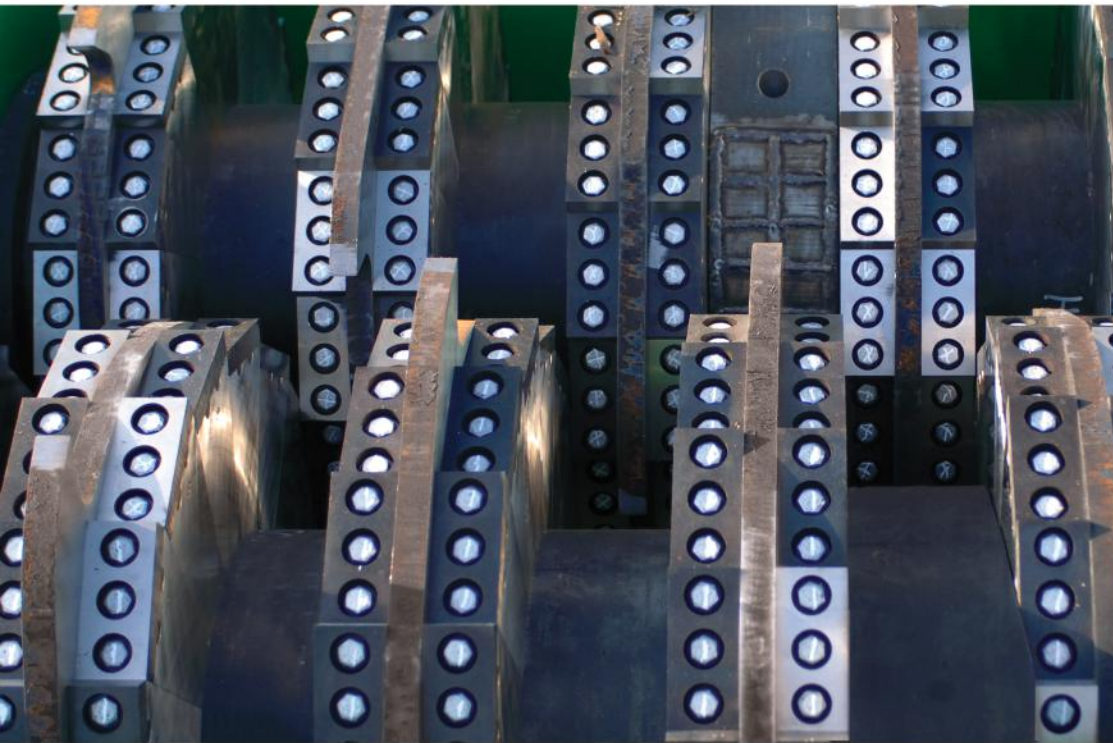

- Multiple Patented Knife Configurations available.
- Reusable resharpenable knives for multiple uses
- Low Cost Energy Efficient Drive Systems
- Extremely versatile
- Able to be bulk fed

4" – 6" CHIPS

PATENTED CM KNIFE CONFIGURATIONS

Multiple Knife Designs Available

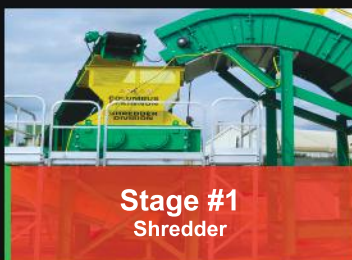

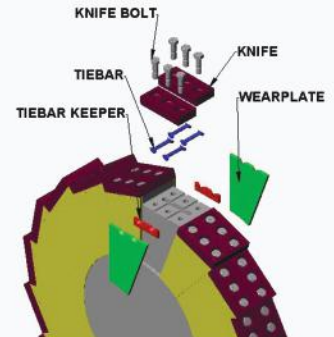

CM “Double Stack™” replaceable knife inserts are made of through hardened tool steel. These knives can be repositioned, reground and reused up to 6 times.

This patented feature also uses the closest knife to knife tolerances possible. This allows the system to produce the cleanest cut chips with the least exposed wire.

This allows you to reduce your knife costs by over 300%.

The CM Primary Shredder is the most cost effective shredder in operation today. It’s “Double Stack™” knife technology allows it to process more tires at lower costs than any competitive system. The cost of knives and the associated costs with knife changes is the leading cost driver when operating a shredder.

CM’s replaceable knife systems run longer between knife changes, take less time to change and costs less to replace. These systems provide the least cost of ownership of any shredder on the market today.

CUSTOMER SERVICE IS SECOND TO NONE – WITH IN STOCK GUARANTEE

- We stock a complete line of replacement parts for all CM equipment with shipping on standard parts within 24 hours.
- Field Service Technicians support if your equipment needs maintenance or repairs, & can generally be on your site within 24 hours.
